

Best Practices for Footing your HFM Reports

12.18.2013

MindStream Analytics helps companies identify, implement and manage technology that allows them to effectively analyze and predict key metrics.

MindStream Analytics is a consulting and managed services provider that specializes in the implementation and management of financial and analytic applications.

For more information, please visit

Agenda

- About MindStream Analytics
- Objectives of the Session
- Challenges experienced creating Scaled/Footed reports
- Excel based solution
- HFR Functionality to address Rounding
- Additional considerations
- Q&A

Objectives

- Understand the purpose for creating Scaled Financial Statements and typical challenges
- Explore an Excel based solution for creating Scaled Reports
- Discuss standard HFR functionality that can impact Scaling/Rounding
- Share Best Practices for created a Scaled and Footed HFR
- Discuss additional considerations

Purpose of Scaling Reports

- GAAP Reporting Standards:
 - Rules of General Application (210.4-01 Form, order, and terminology.)
 - (b) All money amounts required to be shown in financial statements may be expressed in whole dollars or multiples thereof, as appropriate.
 - Standardized approach to Financial Statement presentation, consistently applied to all balances period over period.
 - Financial Statements must reflect in good faith the status of the company.

- Allows the reviewer/investor to focus on the relevant information and identification of trends impacting the business.
 - \$1,932,093,432.35 compared to \$1,932 Million

Challenges creating Scaled Reports

- Scaled balance detail may not foot/cross-foot to rounded sub-totals and totals within the report.
- Manual intervention required to correct any footing issues caused by the rounded values.
- The resolution of footing issues can be subjective period over period, resulting in inconsistencies.
- Time consuming for preparer to resolve footing issues multiple times during the close cycle for multiple reports.
- Unsecure modifications of data increase audit risks
- “Hidden” adjustments may be included within the report which can be forgotten about over time. (i.e. +1 in a formula that is not removed the following period)
- Values appearing on multiple reports may be rounded/footed differently depending on the report (i.e. Cash Flow to Balance Sheet comparisons)

Typical Excel Based solution

- Data extracted from HE/HFM into Excel in the format of the financial statement being prepared.
- Excel formulas utilized to round the balances extracted from the source application.
- Footing/Cross-footing check totals utilized to identify any issues.
- Manual adjustments made within the Excel document to resolve any footing/cross-footing issues.

Example: Excel based solution

Rounded Income Statement by Reporting Unit

For the Year ended December 31, 2012

	<u>Reporting Unit #1</u>		<u>Reporting Unit #2</u>		<u>Reporting Unit #3</u>		<u>Consolidated Total</u>		<u>Cross-foot Items</u>
	HFM 000's	Round M	HFM 000's	Round M	HFM 000's	Round M	HFM 000's	Round M

Foot Items		0		0		0		0	

- Scaling (Cell Format) - Determines the display of values in whole numbers, tens, hundreds, thousands, millions, and so on.
 - Similar to the following formula: $546,602/1000 = 546$
- Rounding (HFR Function) - Round is a mathematical function that rounds a number up or down by the specified digits.
 - Similar to the following formula: $\text{Round}(546,602,-3) = 547,000$
- Scaling and Rounding can be combined within an HFR to ensure that the resulting value is appropriately displayed.

Building the HFR Solution – Footing the Report

1. Use dynamic member selection functions to pull in all required accounts for a sub-total, excluding the “plug” value.
Note: Ensure that the order of the members is correct when utilizing this function.
2. In a separate row, select the sub-total associated with the Accounts from Step #1.

		A
		FT_AL
		LM_AL
		SG_ALL
		[None]
		[ICP Top]
		Entity
		Actual
		YTD
		<Entity Curr Total>
		PD_GALLL
		DT_PST
2	A010T	#
3	A020T	#
4	A025T	#
5	A030T	#
6	A040T	#
7	A060T	#
8	A070T	#
9	A080T	#
10	A080S	#
11	A090T	#

Building the HFR Solution – Footing the Report

3. Create a formula column, apply the appropriate Scaling format and Round function.

	A	B
	FT_AL	Round(col[A],-6)
	LM_AL	
	SG_ALL	
	[None]	
	[ICP Top]	
	Entity	<<MemberDescription Grid1", 2/A/1, 'Entity')>
	Actual	
	YTD	
	<Entity Curr Total>	
	PD_GALLL	
	DT_PST

Building the HFR Solution – Footing the Report

4. Insert a formula row between the detail Accounts and the Sub-Total.

		A	B
		FT_AL	Round(col[A],-6)
		LM_AL	
		SG_ALL	
		[None]	
		[ICP Top]	
		Entity	<<MemberDescription Grid1", 2/A/1, "Entity")
		Actual	
		YTD	
		<Entity Curr Total>	
		PD_GALLL	
		DT_PST	
2	A010T		# = #
3	A020T		# = #
4	A025T		# = #
5	A030T		# = #
6	A040T		# = #
7	A050T		# = #
8	Policy loans	= #	= #
9	A060T		# = #
10	A070T		# = #
11	A080T		# = #
12	A080S		# = #
13	A090T		# = #

Building the HFR Solution – Footing the Report

- In the formula column, for the newly created formula row, create a cell formula to subtract the detailed Rounded values from the Rounded sub-total.

Sum() Round([A,13].-6)-row[2]-row[3]-row[4]-row[5]-row[6]-row[9]-row[10]-row[11]-row[12]

Grid1		A	B
		FT_AL	Round(col[A].-6)
		LM_AL	
		SG_ALL	
		[None]	
		[ICP Top]	
		Entity	<<MemberDescription Grid1", 2/A/1, "Entity")
		Actual	
		YTD	
		<Entity Curr Total>	
		PD_GALLL	
		DT_PST	
2	A010T	#	= #
3	A020T	#	= #
4	A025T	#	= #
5	A030T	#	= #
6	A040T	#	= #
7	A050T	#	= #
8	Policy loans	= #	= #
9	A060T	#	= #
10	A070T	#	= #
11	A080T	#	= #
12	A080S	#	= #
13	A090T	#	= #

6. Continue performing these steps for all sub-totals within the report

Recommendation: Following the logic above, build the entire report within Excel to ensure that the formulas are operating appropriately before building in HFR.

- Consistent Methodology must be defined for the report
 - A “plug” location must be identified for every sub-total within the report. Includes any cross-foot “plug” locations.
- If HFR Expansion functionality is utilized within the Report, ensure that the Footing formula is appropriate.
- Values such as Operating Income (Revenue – Expense) must be handled differently when there is no detailed account to plug the Foot value.
- If new Accounts are created within Metadata, the report should be reviewed to ensure the Accounts are appropriately included within the calculation.
- Check totals can be established within the report to ensure that the Footing Plug Locations are adequately displayed.
- The level of scaling included within the report must be included within the Header based on GAAP requirements.

Thank You !
